Mike and Susan,

This is a project plan I'm using to track tasks and work on the WA hydro permits. I put this together last week for myself, so it's probably more detailed than you want, but you can pull the key dates that are on Susan's spreadsheet or I can do that if you link. If you need anything else, please let me know.

I talked with Catherine and will be talking with the Corps this afternoon. Our general sense is that I probably can include the fish tank-related outfalls (anesthetizing, cooling water that goes through fish units) and it won't be a problem, so that's my plan for now unless I run into issues. The rest of the discharges/wastestreams seem similar enough to Dru's permit. Thanks - Jenny
